

## Orthoptic Student Case Study

# Meet Isra

**"I love the medical aspect, the hospital environment, and the fact that the job involves both paediatric and adult-facing roles. It is non-invasive but plays a crucial role in the lives of many individuals."**

**What is a typical day like?** It consists of lectures, revising, and time to relax.

**Three words to describe the course?**  
Placement, Eyes, and Vision

**What is the best part of your course?** Going on placements around the UK and exploring new locations

**What is the most challenging part?** Adapting to a new environment each time we're on placement whilst also having university work

**What skills/experiences have helped you?**  
Experience with people and working in a team. You need to have good time management as there's a lot of work and revision to do and balance.

**Advice for prospective students?** Manage your time effectively. You need to revise in third year.

**What are you looking forward to in your orthoptic career?** Processing and learning new things from other orthoptists and branching out into different roles.
